

OSA/ILS 95 Annual Meeting Invited Paper Abstract

Phase control of molecular ionization and dissociation*

K. C. Kulander, Lawrence Livermore National Laboratory, F. H. Mies, National Institute of Standards and Technology and K. J. Schafer, University of California at San Diego

Multiphoton excitation of the hydrogen molecular ion by a laser field and its second harmonic is studied using a simplified collinear model. Completely coupled dynamics shows that significant control of ionization versus dissociation can be accomplished by varying the initial vibrational state or the relative phase between the fields.
